

Download / Extract the Object File.

Click on the Latest object download link on the downloads page and save the file to your desktop for easy access.

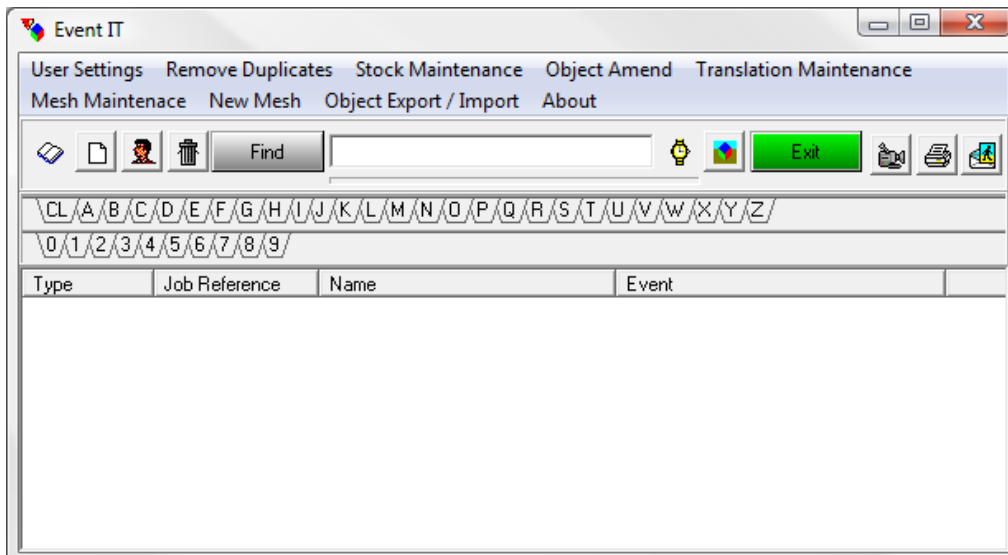

When down loaded double click on the ecobj.exe file. It will open a Winzip window.

Press the **Unzip** button at the top right. The file is now extracted to your tss folder on the local C drive.

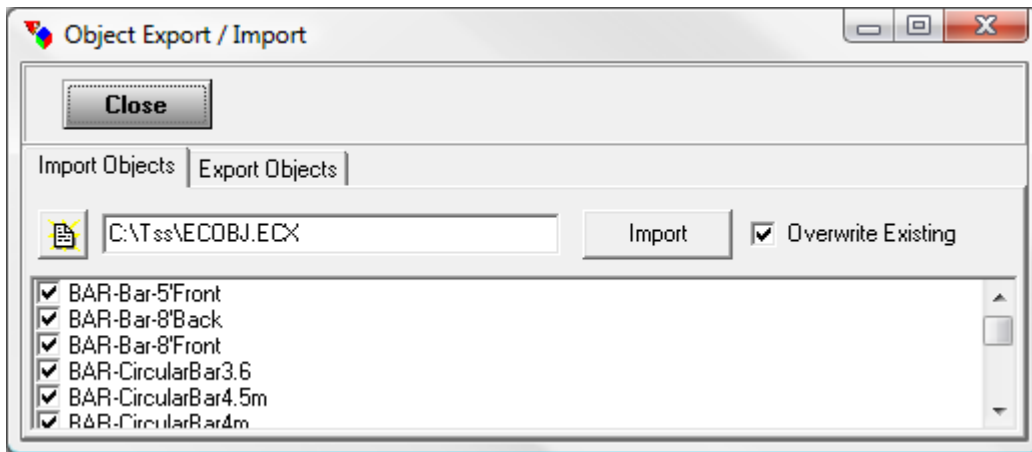

Now you just need to import it.

Object Export / Import

Use this routine to add new objects to your database.

After clicking on the **Object Export / Import** tab on the first screen it opens up a new window and from there you can import new objects.

 Browse for new objects file.

The file will be located in the tss folder on your C drive.

After selecting the file make sure all the objects are ticked and press the import button.
